Data Set: Canadian Election Study, 2011, Voter Turnout

Data File: CES2011-turnout.txt

Source: Extract from data set distributed by the Institute for Social Research, York University

Variables:

household   Household ID number.

province   Province code (NL, PE, NS, NB, QC, ON, MB, SK, AB, BC); provinces were used as strata in the sampling design.

population   Population of the respondent's province, number over age 17.

weight   Weight sample to size of population, taking into account unequal sampling probabilities by province and household size.

education   Respondent's level of education: lessHS, HS, somePS, college, bachelors, higher.

gender   Female or Male.

age   Age in years.

income   Respondent's family income, in $1000s, categorized as <30, 30-59, 60-89, 90-109, 110+. This variable was constructed from reported income in 1000s and reported categorized income. The latter question was asked if the respondent failed to answer the former question.

voted   Self-report of voting: Yes or No.

Note: The are missing values in this data set, including due to panel attrition, coded as NA.
